

Screw Feeder

DDSR60 (-MS)

Volumetric and Gravimetric

General Information

The [DDSR60](#) feeder is ideal for difficult flowing, sticky or floodable bulk ingredients at medium feed rates.

The feeder has the following main components: A stainless steel screw trough, an agitator in the screw trough, a 3 phase motor as agitator drive, a twin screw, a screw tub-e, a 3 phase motor as screw drive and an extension hopper with volumes of 200 dm³ (7 cuft) or 300 dm³ (10.5 cuft).

A 180 dm³ (6.4 cuft) hopper with a vertical agitator (AR) is also offered for sticky ingredients that tend to compact and bridge in the extension hopper.

The horizontal agitator works to consistently fill the screw and prevents hopper bridging while providing mass flow. This results in optimal feeder accuracy and control.

The [DDSR60](#) is easily disassembled for wet or dry cleaning. All service is from the front or back.

The [weighing system MS](#) is available as gravimetric version with four high resolution load cells with advanced filtering technology.

The unit conforms to CE directives.

Model Specification

Screw drive	Three-phase motor
Drive power	0.75 kW (1.01 HP)
Screw speed	320 min ⁻¹
Screw speed optional	-
Trough agitator	yes

Control Modules

Control and speed modules are offered either mounted onto the feeder ([Congrav® CM-E](#)) or are available for mounting in a separate control panel ([Congrav® CB-E](#) or [Congrav® CB-S](#)).

Controls can communicate directly to most host/ PLC systems or to Brabender Technologie Congrav® Operator Interfaces.

* Theoretical values at 100% screw filling level and motor speed. Depending on the flow characteristics the screw filling level may decrease to 50%. Further limitations have to be considered for gravimetric feeding, as max. speed should be reduced to allow for bulk density variations.
